

## Product Profile: Earnie 32 Payroll Manager

In a crowded marketplace – with many hundreds of potential suppliers jostling for your business – we need to make sure that we stand out as your number one supplier of choice. This is why we make the following five commitments...

earnie

### Flexibility and Ease of Use

The **Small Business Edition** is targeted at small companies with up to 100 employees. It is a well rounded package which is able to cope with many of the common problems that payroll legislation poses. The **Professional Edition** offers real power and flexibility. Calculations can be tailored, costs analyzed in great detail and reports produced quickly and easily. The **Small Business** limits have been removed and the product has been optimized for more demanding payrolls.

The **Professional Edition** has been designed to deal with the payrolls of a medium to large organization with a different database (SQL) for companies with many more than a 1000 employees. EARNIE/32 is a payroll system, not just the payroll module of an accounts system. With its strong regard to the Microsoft set of standards it will remain at the forefront of modern technology for many years to come.

### Installation and Training

Although the most common benefit stated by our customers is the ease of use many would agree that training is still important. The flexibility of the system can only be fully appreciated if you take the recommended training with one of our experienced consultants. This means the consultant can install EARNIE and recommend the optimum set up for the software. With the trainer's advice you can then make sure the information is set up in the best way to suit your needs right from the outset. Use the trainer's knowledge and experience to implement the procedures you have developed to handle your company's needs. The training that follows helps you find the quickest and easiest way to run your payroll.

### Reporting

We know that Payroll Departments have to pay people accurately and on time. . . but it doesn't stop there. They must also be able to provide information to other departments quickly and in a useful format. That is why EARNIE/32 has a library full of standard reports, most of which have been developed thanks to listening to our extensive customer base of over 3500 companies. However, every company has their own needs which are where the two report writers come in to use. The **Quick Report Writer** allows you to design and print simple summary reports in minutes. You can choose up to ten fields to appear with the standard initial columns of employee name and code number. You decide the order in which the fields appear and you can even include simple formulas to add, subtract, multiply or divide column data. If you need to have more control over the design element of your reports or include more analysis you can always use the **Crystal Report Writer**. Ideal for payslips, cheques and bank reports, Crystal allows you to position each item exactly where you want it. You can also include logos and use different fonts and colors.

It is a well rounded package which is able to cope with many of the common problems that payroll legislation poses

## Integration

As specialists in payroll software, Intex knows how important it is to make sure EARNIE/32 links to as many other software packages as possible. From Personnel and Time & Attendance to Accounts and BACS, EARNIE/32 has many standard links to well known packages and flexible general links that can be used with most others. In fact, EARNIE/32 is the recommended payroll package to complement many leading accounts and personnel products.

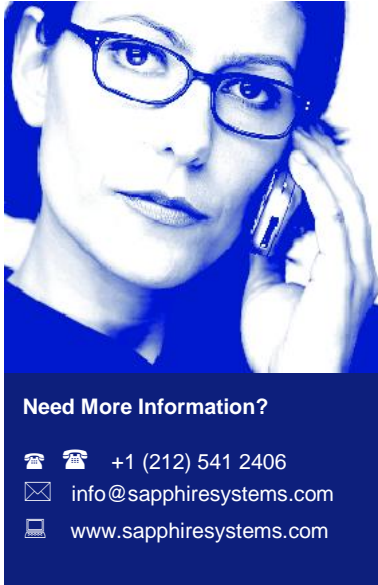

## Service

A dedicated team of support staff, IPPM qualified or training is just a phone call away. Friendly and helpful, you can rely on Intex to help even in the most demanding of situations. With over 20 years experience supporting payroll software Intex can offer you an excellent back up to the payroll knowledge and experience within your own company.
