Get the most out of your SAP Business One Solution with Sapphire

So that you get the most out of your SAP Business One solution, Sapphire's team of highly skilled experts have created a series of 'Add-on' programmes designed to heighten the efficiency of your software, reduce work load and generally make your life easier. All of Sapphire's 'Add-on' facilities are extremely user friendly and require minimal training. And with full integration into your current software set-up and installation in a matter of days, you could be reaping the benefits sooner than you think. Contact us now to see how one or all of these tools can free up valuable resource; ultimately saving you time and money.

SAP Business One Add-ons from Sapphire:

Intercompany Trading

If your organisation has more than one office, you will be familiar with the difficulties of managing financial information from more than one source – particularly if those offices are located in more than one country. Designed to provide financial data consolidation, this SAP Business One complementary solution enables inter-divisional transactions. It allows sharing of master data ensuring you always have business insight of your organisation at your fingertips.

Extended Analysis

In current times having full visibility of company finances is crucial to any successful business; Sapphire's extended analysis tool for SAP Business One enables deep levels of financial analysis with or without using segmented charts of accounts. A standard SAP Business One set-up allows only 2 dimensions of analysis for non segmented charts of accounts – by project and profit centre - and up to 5 dimensions for segmented charts of accounts – by project and profit centre - and up to 5 dimensions for segmented whereas the extended analysis tool facilitates unlimited dimensions, for example by division, by region or by department being just a few variations.

Training and course booking

Any business that offers both internal and external training courses will only know too well that this involves a great deal of organisation that can be very time consuming and prone to human error. Sapphire's training and course booking module provides automatic allocation of required materials and goods such as booking a room or projector thus ensuring everything runs as smoothly as possible. This tool also enables a company to record full training course schedules and set up of sessions as well as track personal achievement and much more.

Mail Merge

This solution enables the user to conduct a mail merge, using the contact data stored within it, directly out of SAP Business One. The tool effectively eradicates the need to query and export the required data into another programme such as Microsoft Excel or Word. This promotes efficient operating practices whilst, at the same time, saving you time and effort.

Contract Billing

Does your company provide maintenance contracts as a service to your clients? If so then Sapphire's Contract Billing module for SAP Business One is a necessity. This tool permits recurring billing to customers and includes functionality such as deferral income, selection of import criteria for payment runs, recommendation reports and much more.

Settings Cloner

If your organisation has a large number of employees to be set up on your SAP Business One system, who all require identical permission settings, then Sapphire's Settings Cloner tool is a must have for you. This very simple solution enables you to create templates and copy form settings from one user to all, irrelevant of which database they operate within therefore saving you valuable time and resource

Bank Statement Import & Bank Transfer

Duplication of work by re keying data into many disparate systems is a problem for most organisations. Sapphire's Bank Statement Import tool allows the user to import bank statements from any banking interface directly into SAP Business One and then run a reconciliation process. This eliminates duplication of effort by keying in data into separate applications. The Bank Transfer solution allows the user to extract outgoing payments from SAP Business One and import in to any banking interface software; again reducing workload.

Sales Forecasting

Sapphire's Sales Forecasting module is designed specifically for any company using Materials Requirement Planning (MRP). This easy to use tool extends the standard SAP Business One functionality allowing the user to forecast in a predefined data range selection.

Auto Numbering

Sapphire's Auto Numbering solution does exactly that; it is perfect for companies who have many employees entering large numbers of contacts and product information into SAP Business One. This tool dictates a code structure: Prefix – Leading No. – Suffix - thus ensuring new records are entered in to your system in sequence and can be found easily.

Prospect Import

Organisations who conduct targeted marketing activity, such as direct mailing and emailing, deal with large quantities of data everyday. Working from disparate spreadsheets and databases can be an arduous and time consuming task. Sapphire's Prospect Import tool enables the user to upload business partners/contact information directly into SAP Business One from external systems such as spreadsheets; flagging duplicated records so that users can amend individual records accordingly.
