Los Angeles, USA – 27 November 2008. Sapphire today announced that it is to supply and implement the SAP Business One business management solution at Knight & Carver Wind Group.

An internationally recognized wind blade fabricator and service producer for utility-scale wind plants, Knight & Carver Wind Group is well-respected in the wind energy industry for its innovation and quality, working closely with the world's largest wind energy producers. The fast-growing Wind Group has service projects at wind farms throughout the U.S. and the world. The Wind Group evolved from the company's proven composite expertise in the yachting new-build and repair industries. In recent years, Knight & Carver Wind Group has serviced, rebuilt and fabricated thousands of blades.

Knight & Carver had a requirement for a new financial accounting and business management solution to replace the existing outmoded and inefficient system, along with various Excel spreadsheets, that the company was using. The company has grown significantly, particularly over the last 6 years, and needed a complete ERP system to create a solid foundation for future growth. Each aspect of company operations is being up-graded, step-by-step, with the clear-cut goal of providing the highest professional service and employee satisfaction – so a user-friendly system was a 'must have'.

The specific objectives for a new business system were to cope with vastly increased transactional volumes and possible changes in the business processing model; support on-line real time financial transactions in a single integrated system with management based KPI's; and to support the wind blade production and wind service business functions in a single system.

Ian Caswell, Managing Director at Sapphire, commented: "Implementing SAP Business One will provide new capability and operating efficiency throughout Knight & Carver's whole business, as well as the ability to integrate with any specific third party systems that might be required in the future, such as applications for logistics and remote field ticket reporting. The management team will benefit from complete visibility of the company and reporting on things such as job-costing data in a timely manner."

"We're excited to enter this new phase of our company's rapid growth, and are pleased to partner with Sapphire's proven team of professionals." said Sam Brown, President/CEO of Knight & Carver. "In choosing

SAP Business One, we've greatly upgraded and streamlined our total operations, allowing us to better serve our customers in every way. As a state-of-the-art company in a fast-evolving industry, we're proud to partner with SAP and Sapphire and offer the highest level of financial accounting and business management."

Mr Caswell concluded: "The team at Sapphire are thrilled to be working with Knight & Carver on this investment in their future growth. SAP Business One is windows based, making it very intuitive and easy to use, so I am sure the team will be more than happy with their new and improved solution and way of working. The fact that it covers all aspects of business management makes SAP Business One a good choice for organizations looking to improve efficiency across their entire operation; plus moving away from a multitude of disparate systems helps keeps costs down from a maintenance point of view."

- END -
